AREE DI RICERCA

La mia ricerca si svolge principalmente nel campo dell'economia sanitaria e della microeconomia applicata, con un'attenzione particolare all'impatto delle politiche, mediante l'applicazione di metodi econometrici. In particolare mi sono occupato di concorrenza nel mercato delle cure primarie, analisi della domanda di antibiotici e resistenza batterica, efficienza delle cure di lungo termine e dei trasporti pubblici locali e, più recentemente, degli effetti dei disastri naturali sulle elezioni e di antidepressivi, inquinamento atmosferico e shock ambientali sulla salute.
